

# BLUE LUBE GASKET LUBE PASTE

## FEATURES AND BENEFITS

J.C. WHITLAM MANUFACTURING COMPANY  
 P.O. BOX 380  
 WADSWORTH, OH 44282-0380  
 PH: (330) 334-2524

**Blue Lube** is a unique emulsified polymer based lubricant marketed for use on gasketed ductile pipe and gasketed plastic pipe. The product has many unique advantages over products currently on the market:

Features	Benefits
<b>100% Water Soluble when used on watermain installation.</b>	<b>Blue Lube will flush out of the system without having to repeatedly flush the line, saving both <u>time</u> and <u>water</u>.</b>
<b>Will not transfer taste and odor when used on potable watermains.</b>	<b>Does not cause a "greasy" taste in the water like many oleate-based lubricants resulting in fewer customer complaints.</b>
<b>Blue Lube has no odor.</b>	<b>Oleate-based lubricants will oxidize when exposed to the environment and release foul odors. Blue Lube will not leave the end user smelling like grease.</b>
<b>Non-reactive to chlorinated water.</b>	<b>Oleate lubricants will react with chlorine to produce aldehydes, increasing the taste and odor problems.</b>
<b>Remains a paste at temperatures above 150 degrees Fahrenheit.</b>	<b>Will not become runny at higher temperatures resulting in loss of product.</b>
<b>Will not break down if repeatedly frozen and thawed.</b>	<b>Blue Lube can be reused if ever frozen.</b>
<b>Brushable to 7 degrees Fahrenheit.</b>	<b>Blue Lube can be used in the cold. Cold weather makes oleate-based lubricants harder to flush out of the system.</b>
<b>Easy Cleanup</b>	<b>Will not stain hands or clothes. Cleans up with water or dry towel.</b>
<b>Emulsified product.</b>	<b>Blue Lube can be used on wet pipe.</b>

**Blue Lube** is available in pints, quarts, gallons, 5 gallon, and 55 gallon drums.
